

Fast Ethernet ports: 24

Gigabit ports: 2

Vty: 0 4 - 5 15

Nvram: show startup-config

Startup Not present: because the setting haven't been saved yet.

Login command required: it forces someone using a console cable to use the password to login first.

Displayed: 5 \$1\$mERr\$ILwq/b7kc.7X/ejA4Aosn0

Why: Its encrypted because of the enable secret command

More passwords: I think that they will not be encrypted because how I understand the command it encrypts the current passwords in the file and any new ones will not be encrypted.

When banner: When you first hit enter after opening the CLI

Why: Short Answer, Security reasons. Long answer, Because of the story you told us about the people who hacked a system and won the case because the company's banner said welcome.

Abbreviation: copy run start.

NVRAM: show run

Recorded changes: Yes
