

Status: u, unencrypted

E indicate: encrypted

Can user see: yes

Compare: passwords has a little lock on it

The result: Access denied because it was encrypted by a different user and my second account isn't the admin account

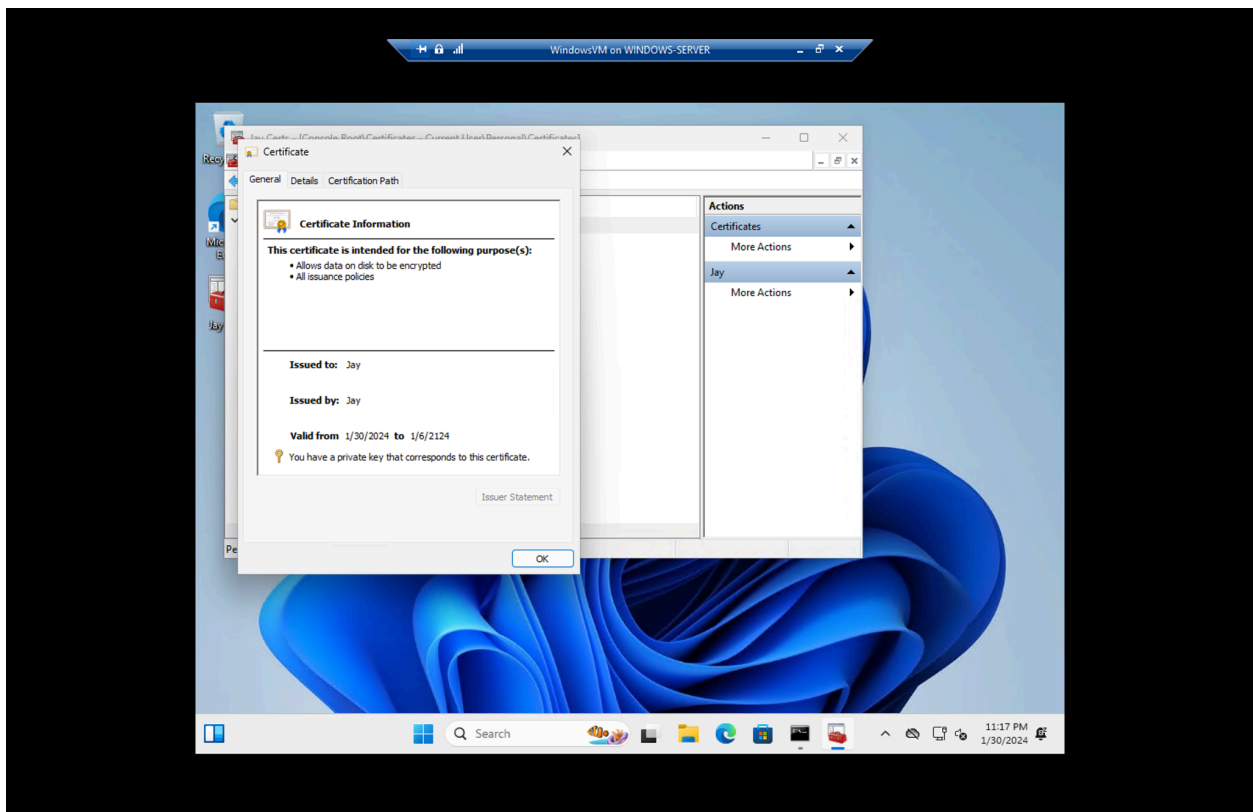

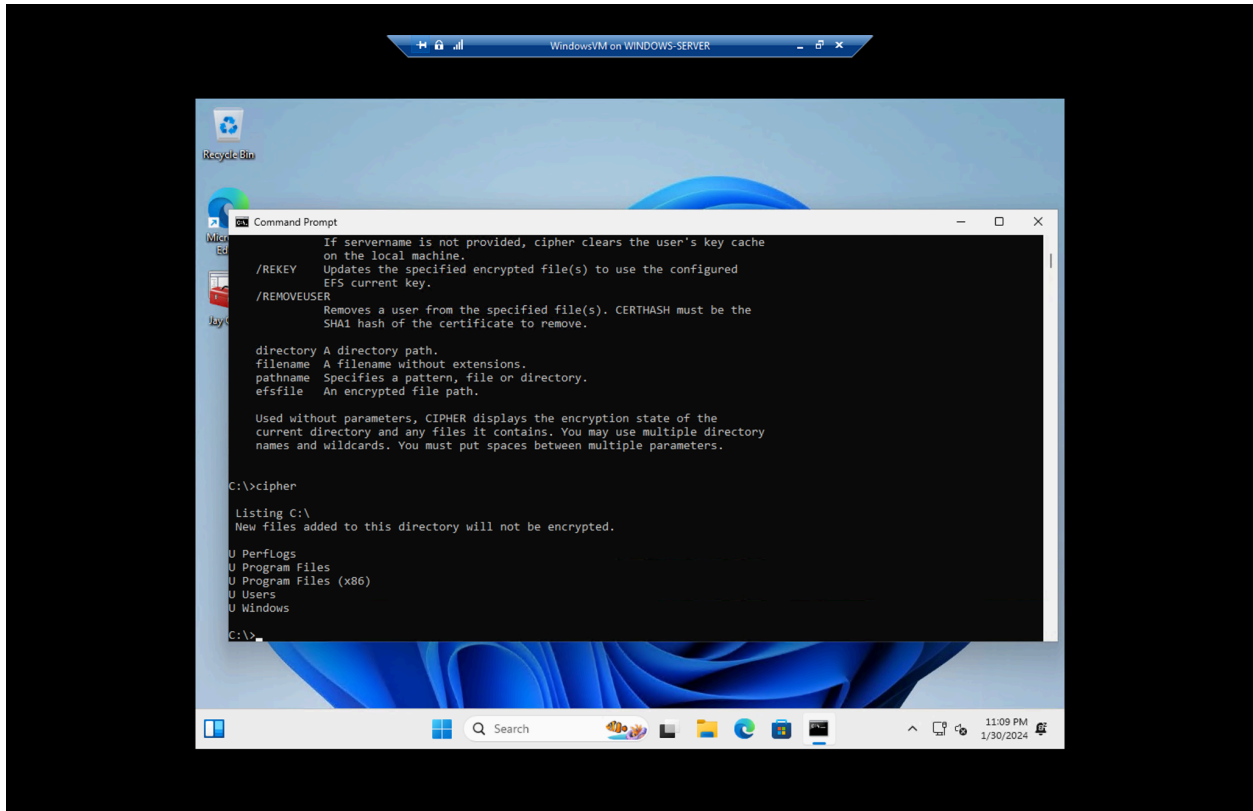

Result: i read the file because I used the runas to make me seem like I'm the user who made the file.

What encryption standard: AES

Symmetric or Asymmetric: Symmetric

What is the purpose of the certificate? For fun

Is the certificate for Symmetric or Asymmetric use? Symmetric

```
cmd (running as DESKTOP-CQBMRDVJay)

C:\confidential>type passwords
The system cannot find the file specified.

C:\confidential>type passwords.txt
This is my super secret list of all the passwords.

C:\confidential>cipher /c

Listing C:\confidential\
New files added to this directory will not be encrypted.

U cheese.txt
E passwords.txt
  Compatibility Level:
    Windows XP/Server 2003

Users who can decrypt:
  DESKTOP-CQBMRDV\Jay [Jay(Jay@DESKTOP-CQBMRDV)]
  Certificate thumbprint: B1EC 89E3 ACB8 CD94 4A6F 5AFD 05CA B3F6 3E64 0F71

No recovery certificate found.

Key Information:
  Algorithm: AES
  Key Length: 256
  Key Entropy: 256

C:\confidential>
C:\confidential>runas "/user:Jay" cmd
Enter the password for Jay:
Attempting to start cmd as user "DESKTOP-CQBMRDV\Jay" ...

C:\confidential>
